

Solu-Cal[®] Powered by Humic Acid Technology

Build Summer Hardiness for Turf and Ensure Summer Recovery *Humic PLUS with ACTIVATED Humic Acid*

Nutrients critical for summer recovery

Summer heat and drought place excess stress on turf. Supporting turf through the summer season and maintaining healthy soil begins with available Calcium and efficient pH management.

Humic PLUS delivers highly soluble, immediately available Calcium and essential Carbon to the soil and plant. These elements help build summer hardiness and turf resiliency.

By ensuring ideal pH quickly and adding Calcium with Humic Acids, plants can maximize nutrient uptake to help develop drought-tolerance and weed resistance. **Humic PLUS** delivers available Calcium plus these benefits:

- Organic Fertilizer Companion
- Carbon source to stimulate and improve soil microbiology
- Promotes super aggressive seedling turf
- 10% increase in water sequestration
- Increases turf performance in shaded areas

All of these benefits in **Humic PLUS** work together to increase root mass surface area and seedling turf density and durability. At 200lbs/acre, **Humic PLUS** supplies 11lbs/acre of Activated Humic/Fulvic Acid in one application.

Coarse Grade 210 SGN | 50lb bag covers 11,000 sq.ft.

Humic PLUS from Solu-Cal is the ideal solution for developing summer hardiness. Visit www.solu-cal.com or [contact us](#) today to learn more!
